Motivated and dedicated individual seeking to join Southwest Airlines as a Technology Junior Associate to contribute to the company's mission of providing friendly, reliable, and low-cost air travel while enhancing my technical skills and fostering professional growth.

FORMAL TRAINING

Parsity, Remote — *Software Engineering Bootcamp*

October 2023 - March 2024

Parsity is a 6-month online bootcamp I have just graduated from this month. Unlike other bootcamps, Paristy taught new and in-demand technologies, such as NextJS and TypeScript, while still teaching the basics of software engineering and valuable languages and technologies like HTML, CSS, JavaScript, React/Redux, MongoDB, Express, and more.

SKILLS

HTML, CSS, JavaScript, TypeScript, Java, SQL, C#, Python, React, Redux, NextJS, Mocha/Chai, NodeJS, MongoDB, Mongoose, ExpressJS, REST APIs, Agile Development

EDUCATION

University of South Florida — *Master's in Medical Science*

JULY 2020 - JULY 2021

Florida Southern College — *Bachelor's in Biology*

AUGUST 2015 - MAY 2019

PROJECTS

Gents Brochure — *Mastering core languages*

My goal with this project was to build an interactive, responsive brochure site for a local barber without the help of frameworks and libraries to show my competency in core languages. This site was coded only using HTML, CSS and vanilla JavaScript: https://adamc7313.github.io/gents-brochure/

Weather App — *Frontend and API skills*

Of course, it's a weather app. With this project, we used an API to fetch current weather data for a user inputted location. It will get the user's current location or use an inputted location and get the 5 day forecast. I was also able to show some of my design abilities with this project: https://adamc7313.github.io/weather-project/

Product List — *Showcasing frontend and backend skills*

This project is a simple product list app, which fetches data from a backend server I created and shows products on the frontend. It allows for filtering, sorting and searching; showcasing my proficiency in full stack development. Tests were written with Mocha/Chai, backend created with Express, Node and MongoDB. Make sure to read the README file and try it out: https://github.com/AdamC7313/product-list
